***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 37-59, drawn to determining activity of an enzyme.

Group II, claim(s) 60, drawn to a mass spec probe.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Group I is a method and Group II is a device. The common technical feature is employing MALDI to determine the activity of an enzyme where the conventional MALDI generally determines the products of a known enzyme reaction.

Nelson (Mass Spec Reviews) entitled "The Use of Bioreactive Probes in Protein Characterization" teaches on page 356 Figure 1, MALDI probes as presently claimed. On page 371 column 1 under D. Activity, the enzyme is characterized rather than the substrate to determine substrate preference, optimal conditions for activity, turnover rate, screening for inhibitors, and specificity of the enzyme.
